# Research Question and Contribution (I)

- **Research Question**
  - Is narrative disclosure conservative?

# Research Question and Contribution (I)

- **Research Question**

- Is narrative disclosure conservative?

- **Definition**

- Narrative conservatism: narratives that reflect bad news in a **timelier**, more **news-consistent**, and **complete** manner than good news.

# Research Question and Contribution (I)

- **Research Question**

- Is narrative disclosure conservative?

- **Definition**

- Narrative conservatism: narratives that reflect bad news in a **timelier**, more **news-consistent**, and **complete** manner than good news.

- **Findings**

- Using 8-K and 10-Q data (1994-2019), we find evidence of narrative conservatism.
  - Narratives are timelier (shorter time lag), more tone-consistent (content sentiment agrees with sign of news), and have more words, more graphs, more items, and more exhibits in reaction to bad news than to good news, where news is measured by returns as in Basu (1997).

# Research Question and Contribution (II)

- **Additional Findings**

- Greater narrative conservatism
  - in voluntary disclosures (compared to mandatory) and MD&A sections (compared to the notes to financial statements).
  - in firms with more intangibles and R&D
  - where managers have incentives to disclose bad news.

# Research Question and Contribution (II)

- **Additional Findings**

- Greater narrative conservatism
  - in voluntary disclosures (compared to mandatory) and MD&A sections (compared to the notes to financial statements).
  - in firms with more intangibles and R&D
  - where managers have incentives to disclose bad news.
- Pervasive property of narratives in period studied

# Research Question and Contribution (II)

- **Additional Findings**

- Greater narrative conservatism
  - in voluntary disclosures (compared to mandatory) and MD&A sections (compared to the notes to financial statements).
  - in firms with more intangibles and R&D
  - where managers have incentives to disclose bad news.
- Pervasive property of narratives in period studied
- Greater narrative conservatism in firms with low (high) conditional (unconditional) conservatism

# Research Question and Contribution (II)

## ● **Additional Findings**

- Greater narrative conservatism
  - in voluntary disclosures (compared to mandatory) and MD&A sections (compared to the notes to financial statements).
  - in firms with more intangibles and R&D
  - where managers have incentives to disclose bad news.
- Pervasive property of narratives in period studied
- Greater narrative conservatism in firms with low (high) conditional (unconditional) conservatism

## ● **Contribution**

- Extend literature on accounting conservatism by defining and documenting the existence of narrative conservatism.
- Explore the links between recognition and narrative disclosure.
- Add to debate on whether managers withhold bad news.
- Add to literature on narrative properties of SEC filings.

# Theoretical Framework: Conservatism

- **Accounting Conservatism**

- Recognition (Beaver and Ryan, 2005; Ball and Shivakumar, 2005)
  - *Conditional*: ex post or news dependent, “higher degree of verification to recognize good news as gains than to recognize bad news as losses,” (Basu, 1997, p. 7) leading to earnings that recognize bad news in a timelier and more complete manner than good news.
  - *Unconditional*: ex ante or news independent. Aspects of the accounting process (measurement and recognition criteria at the inception of assets and liabilities), leading to a persistent understatement of net assets.

# Theoretical Framework: Conservatism

## ● Accounting Conservatism

- Recognition (Beaver and Ryan, 2005; Ball and Shivakumar, 2005)
  - *Conditional*: ex post or news dependent, “higher degree of verification to recognize good news as gains than to recognize bad news as losses,” (Basu, 1997, p. 7) leading to earnings that recognize bad news in a timelier and more complete manner than good news.
  - *Unconditional*: ex ante or news independent. Aspects of the accounting process (measurement and recognition criteria at the inception of assets and liabilities), leading to a persistent understatement of net assets.
- What role narrative disclosure?
  - Prior work focuses on recognition, little is known about conservative disclosure (Kothari et al., 2009, p.243).
  - A “commitment to timely disclosure of bad news need not come exclusively through financial statement recognition” (Guay and Verrecchia, 2018, p. 73-74):

# Theoretical Framework: Recognition and Disclosure (I)

*“Although financial statements have essentially the same objectives as financial reporting, some useful information is better provided by financial statements and some is better provided, or can only be provided, by notes to financial statements or by supplementary information or other means of financial reporting.” (FASB 1984, par.7)*

# Theoretical Framework: Recognition and Disclosure (I)

*"Although financial statements have essentially the same objectives as financial reporting, some useful information is better provided by financial statements and some is better provided, or can only be provided, by notes to financial statements or by supplementary information or other means of financial reporting." (FASB 1984, par.7)*

- **Reporting requirements (e.g., FASB, IASB)**
  - Recognition: depictions in numbers with captions on the face of the financial statements (Schipper, 2007).

# Theoretical Framework: Recognition and Disclosure (I)

*“Although financial statements have essentially the same objectives as financial reporting, some useful information is better provided by financial statements and some is better provided, or can only be provided, by notes to financial statements or by supplementary information or other means of financial reporting.” (FASB 1984, par.7)*

- **Reporting requirements (e.g., FASB, IASB)**
  - Recognition: depictions in numbers with captions on the face of the financial statements (Schipper, 2007).
  - An economic event can be recognized if it satisfies *all*:
    - Definition, measurability, relevance, and reliability criteria

# Theoretical Framework: Recognition and Disclosure (I)

*“Although financial statements have essentially the same objectives as financial reporting, some useful information is better provided by financial statements and some is better provided, or can only be provided, by notes to financial statements or by supplementary information or other means of financial reporting.” (FASB 1984, par.7)*

- **Reporting requirements (e.g., FASB, IASB)**

- Recognition: depictions in numbers with captions on the face of the financial statements (Schipper, 2007).
- An economic event can be recognized if it satisfies *all*:
  - Definition, measurability, relevance, and reliability criteria
- Even if criteria are met, annual reports are *still* annual (low frequency and lack of timeliness). Information may need to be disclosed earlier.

# Theoretical Framework: Recognition and Disclosure (I)

*“Although financial statements have essentially the same objectives as financial reporting, some useful information is better provided by financial statements and some is better provided, or can only be provided, by notes to financial statements or by supplementary information or other means of financial reporting.” (FASB 1984, par.7)*

## ● Reporting requirements (e.g., FASB, IASB)

- Recognition: depictions in numbers with captions on the face of the financial statements (Schipper, 2007).
- An economic event can be recognized if it satisfies *all*:
  - Definition, measurability, relevance, and reliability criteria
- Even if criteria are met, annual reports are *still* annual (low frequency and lack of timeliness). Information may need to be disclosed earlier.
- Disclosure: possibility to *timely* convey information that fails to meet certain recognition criteria
  - Displays in the notes and supporting schedules that accompany financial statements (Schipper, 2007); but also:
  - 10-Qs, 8-Ks, press releases, conference calls, social media, etc.

## Theoretical Framework: Recognition and Disclosure (II)

- **Role of narratives in accounting conservatism**
  - Supplement information that cannot be recognized
  - Explain/complement/provide details of recognized line items

## Theoretical Framework: Recognition and Disclosure (II)

- **Role of narratives in accounting conservatism**
  - Supplement information that cannot be recognized
  - Explain/complement/provide details of recognized line items

### **Narrative conservatism**

Narratives that reflect economic losses (bad news) in a timelier, more news-consistent and complete manner than economic gains (good news).

## Theoretical Framework: Recognition and Disclosure (II)

- **Role of narratives in accounting conservatism**

- Supplement information that cannot be recognized
- Explain/complement/provide details of recognized line items

### **Narrative conservatism**

Narratives that reflect economic losses (bad news) in a timelier, more news-consistent and complete manner than economic gains (good news).

- **Narratives may not be conservative:**

- Strategic disclosure and bad news hoarding/smoothing (e.g., Kothari et al., 2009; Ge and Lennox, 2011; Segal and Segal, 2016; Chapman et al., 2019).
- “Full disclosure,” (Guay and Verrecchia, 2018) may imply greater timeliness and completeness of good news disclosure, if all bad news are recognized.

# Theoretical Framework: Timeliness

- **Asymmetric Timeliness**

- Timeliness implies that disclosure is made *in time* to be able to influence users' decisions.
- Managers may delay bad news disclosure to mitigate its negative economic consequences (Chambers and Penman, 1984; Niessner, 2015; Segal and Segal, 2016; Brockbank and Hennes, 2018).
- Managers may accelerate good news disclosure to increase insider profitability (Khalilov and García Osma, 2020).

# Theoretical Framework: Timeliness

- **Asymmetric Timeliness**

- Timeliness implies that disclosure is made *in time* to be able to influence users' decisions.
- Managers may delay bad news disclosure to mitigate its negative economic consequences (Chambers and Penman, 1984; Niessner, 2015; Segal and Segal, 2016; Brockbank and Hennes, 2018).
- Managers may accelerate good news disclosure to increase insider profitability (Khalilov and García Osma, 2020).

## H1a: Asymmetric Timeliness

Narrative disclosure is timelier in response to bad news than to good news.

# Theoretical Framework: Asymmetric News-consistency

- **News-consistency**

- News-consistency implies that disclosure agrees with the underlying economic event in content sentiment.
- Tone influences how information is perceived or processed, and thus it can be employed both to inform or mislead (Davis et al., 2012; Li, 2010; Huang et al., 2014).
- Firms may deploy a uniformly positive tone in both good and bad news disclosure, resulting in higher news-consistency in good news disclosure
  - “A careful manager might use 90% positive words in dismissing an employee.” (Loughran and McDonald, 2016, p.1206)

# Theoretical Framework: Asymmetric News-consistency

## ● News-consistency

- News-consistency implies that disclosure agrees with the underlying economic event in content sentiment.
- Tone influences how information is perceived or processed, and thus it can be employed both to inform or mislead (Davis et al., 2012; Li, 2010; Huang et al., 2014).
- Firms may deploy a uniformly positive tone in both good and bad news disclosure, resulting in higher news-consistency in good news disclosure
  - “A careful manager might use 90% positive words in dismissing an employee.” (Loughran and McDonald, 2016, p.1206)

### H1b: Asymmetric News-Consistency

Narrative disclosure is more news-consistent in response to bad news than to good news.

# Theoretical Framework: Asymmetric Completeness

## ● **Completeness**

- Completeness implies that disclosure includes all necessary information for a user to understand the underlying economic event.
  - Disclosure reduces information asymmetry: lowers CoC and increases liquidity (Diamond and Verrecchia, 1991; Diamond, 1985; Leuz and Verrecchia, 2000)
- Good news disclosure may be completer, relative to bad news, to boost performance (Teoh et al., 1998; Lang and Lundholm, 2000).
- Bad news disclosure may be more complete, relative to good news, to avoid litigation risk (Skinner, 1994, 1997; Marinovic and Varas, 2016).

# Theoretical Framework: Asymmetric Completeness

## • Completeness

- Completeness implies that disclosure includes all necessary information for a user to understand the underlying economic event.
  - Disclosure reduces information asymmetry: lowers CoC and increases liquidity (Diamond and Verrecchia, 1991; Diamond, 1985; Leuz and Verrecchia, 2000)
- Good news disclosure may be completer, relative to bad news, to boost performance (Teoh et al., 1998; Lang and Lundholm, 2000).
- Bad news disclosure may be more complete, relative to good news, to avoid litigation risk (Skinner, 1994, 1997; Marinovic and Varas, 2016).

### H1c: Asymmetric Completeness

Narrative disclosure is more complete in response to bad news than to good news.

# Research Design: Proxies

- **Narrative Disclosure Corpora**

- Corpora: 8-K filings because they (a) are more credible, (b) have higher reporting threshold and (c) are more timely than other corporate communication channels.

- **Proxies for Textual Properties and News**

- Timeliness: reporting time lag, defined as the number of days elapsed between the news release date and the filing date of the studied disclosure
- News-consistency: the marginal change of tone in response to increase (good news) or decrease (bad news) in stock market returns.
- Completeness: the total number of 8-K words, filings, items, exhibits and graphs
- News: stock returns (Basu, 1997).

# Research Design: Model

## ● Model Specification

$$TEX_{i,t} = \beta_0 + \beta_1 \Delta DRET_{i,t-tlag} + \beta_2 BN_{i,t-tlag} + \beta_3 \Delta DRET_{i,t-tlag} \times BN_{i,t-tlag} + \sum \beta_n CONTROLS_{i,t} + \epsilon_{i,t} \quad (1)$$

Figure 1: 8-K Matching Process

# Research Design: Data

- Data source: Compustat, CRSP and I/B/E/S

Table 1. Sample Selection Process

	Numer of observations
Retrieved from EDGAR	1,540,911
After matching with Compustat and CRSP data	442,575
(-) Number of obs. from utility and financial firms	112,729
(-) Number of firm-quarters with missing values in SIC, SIZE, MTB, LEV, or with non-positive total assets or book value of equity or common shares outstanding, or with common share price less than \$1	46,865
(-) Number of obs. with total words less than 1% percentile (133 words)	2,785
(-) Number of obs. that are reversals of previous news day	5,160
(-) Number of obs. with negative or larger than 99% percentile TLAG	154,861
After dropping obs. with missing values in key variables and screening	120,175
After merging with IBES and Compustat Segment data (Full 8-K sample)	83,464

## Results: Robustness Checks

- Our evidence of narrative conservatism is robust to
  - excluding 8-K items on results of operations that contain quarterly or annual financial statements (Segal and Segal, 2016);
  - using an alternative 8-K reporting time lag definition (Carter and Soo, 1999; Niessner, 2015; Chapman et al., 2019);
  - excluding a priori bad news 8-K items (Segal and Segal, 2016);

# Conclusions

## ● Conclusions

- We provide evidence that narratives reflect bad news in a more complete, news-consistent, and timely manner than good news.
- Firms report lengthier 10-Qs to clarify rather than obfuscate bad news, and provide more 8-Ks and 8-K items in response to bad news than to good news.
- We document greater narrative conservatism in the MD&A section and in voluntary disclosure. Also, narrative conservatism is pervasive in firms with high conditional conservatism, intangible assets, R&D expenses and proprietary costs.
- We find greater narrative conservatism in settings where managers have strong incentives to disclose bad news.
